# How to Create a New Administrator User Account in Windows 11

To change your current user profile name, log into a different administrator account. You cannot modify an existing user account profile path from the same account.

To do this, you can [enable and use the built-in administrator account in Windows 11](#). If not, follow these steps to create a new administrator account in Windows 11.

To create a new administrator account:

1. Press **Win + I** to open **Settings**.
2. Open the **Accounts** tab in the left pane.
3. Click on **Family & other users** in the right pane.

Windows 11 add user account

4. Click **Other users**. This option is useful to create a local user account without a Microsoft Account.

Add other user account in Windows 11

5. Next, click on **I don't have this person's sign-in information**.

Creating a local user account without a Microsoft account

[xRemove Ads](#)

6. Click on **Add a user without a Microsoft account**.
7. Type a name for the user account. Leave the password field empty and click **Next**.
8. Click on the new user account and click **Change account type**.
9. Click the drop-down for **Account type** and select **Administrator**.
10. Click **OK** to save the changes.

Now, you can log in with your new administrator account. To do this, click **Start**, then click on the user profile name, and select **Sign out**. Next, sign in with the new administrator account.

# How to Change the User Profile Folder Name Using the Registry Editor

You can modify the registry entries associated with your user account to change the user profile folder name in Windows 11.

This process involves modifying your registry entries, so we recommend you create a restore point. You can [use the restore point to restore your PC](#) if something goes wrong during the process.

To change the user profile folder name:

1. Sign out from your current user account and log in with a built-in or newly created administrator account
2. Next, press **Win + R** to open the **Run** dialog.
3. Type **netplwiz** and click **OK** to open the **User Accounts** dialog.
4. Here, select your **user account** and click on **Properties**.

User accounts properties.

5. In the **User Properties** dialog, you'll see your **User name** and **Full name**.

6. Type a name for your user name, click **OK** and **Apply**.

user account user name

7. Close the **User Account** dialog and perform a restart.
8. Next, open the Command Prompt. To do this, press **Win + R**, type **cmd**, and click **OK**.

SID command prompt user account.

9. In the Command Prompt window, type the following command to view **SID (Security Identifier)** for all user accounts:

```
wmic useraccount get name,SID
```

10. Here, note the **SID** for the user account you want to change the user profile folder name.  
In this case, the **SID** for the username **tashr** is **S-1-5-21-200486166-247335145-1769094253-1001**.

<https://13a67dc51b5b93e553d37f208fc4cf37.safeframe.google syndication.com/safe frame/1-0-40/html/container.html>

Now that we have the SID, we must enter it into the Registry Editor. To do that, follow these steps:

1. Press **Win + R**, type **regedit**, and click **OK** to open **Registry Editor**.
2. In the Registry Editor, navigate to the following location:

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\ProfileList
```

3. Inside the **ProfileList** key, locate and click on the key name identical to the **SID** you noted earlier.
4. In the right pane, right-click on **ProfileImagePath** value and select **Modify**.

Modify profile image path in the registry editor.

5. Enter a name you want for the profile folder and click **OK**.

add new name profile image path registry editor

6. Close the Registry Editor and Command Prompt window if open.
7. Next, press **Win + E** to open File Explorer and navigate to **C:\Users\**.

Rename user profile folder name.

8. Select your **user profile** and press **F2** to rename it. Enter a new name for your user profile (it must match the user name entered in the Registry Editor).

9. Click away and then click **Continue** to save the changes.

You may sometimes encounter the "You can't perform this action" error when renaming the folder. This error often occurs if you switch to a different administrator account without signing out from the primary user account. Alternatively, restart your PC and repeat the steps to rename the user profile folder without the error.
